Product Description

Product features:

Body size: The length, width and height of the body vary according to the specific configuration and regulatory requirements. Generally speaking, the body length of this model may exceed 8 meters, and the width and height are also larger to accommodate more cargo.

Product usage:

Engineering operations. This model can play an important role in various engineering operation sites, such as infrastructure construction and road construction. Its self-unloading function makes cargo unloading more convenient and quick, meeting the engineering operation's demand for efficiency and convenience. At the same time, its stable performance and good passability also ensure the smooth progress of engineering operations.

Product advantages:

High cost performance. Although the Euro II emission standard is slightly behind the current international standard, in some specific markets or developing countries, the Euro II standard is still in line with local environmental regulations. Therefore, the right-hand drive Euro II version of the HOWO NX380 has certain advantages in price and can meet customers' pursuit of cost performance.

After-sales service

AUTOKING has four overseas branches to develop overseas customers. We also carry out after-sales service guarantee for vehicles.

Is the price cheap?

Stable control. The vehicle's control performance is stable and reliable, and it can maintain good driving stability both on urban roads and in complex working conditions. This is due to the vehicle's advanced chassis design and high-quality control configuration.

Is international logistics guaranteed?

After the purchase of goods are shipped, the company tracks the order in full. Shipping video and transport video we provide for you at any time.
