Product Description

High quality Medical Ambulance Stretcher Cars for Hospitals

Product features:

The car is equipped with special lighting for emergency response, and the left and right sides of the car are equipped with lighting, which is controlled individually. There is a blue flashing light installed at the rear of the car body, red/blue reflective tape at the waist, and a red cross warning sign at the front, etc. These are all small upgrades on the basic configuration.

This ambulance can ensure clean air. Through the negative pressure cabin roof-mounted independent air conditioner (independent of the cab air conditioner), fresh air from the outside is sucked in and converted into cold air to enter the negative pressure medical cabin, ensuring the freshness and cleanliness of the air in the medical cabin.

It can protect the safety of medical staff. Based on the principle of fluid mechanics, a uniform and continuous directional airflow is formed from the medical staff area to the patient area, and then discharged out of the vehicle after disinfection and filtration, thereby maximally protecting the safety of medical staff.

Product advantages:

This ambulance has a completely sealed partition between the cab and the emergency compartment, and is equipped with an observation window. The interior of the vehicle uses composite material technology, and a set of composite material emergency equipment cabinets will be installed on the left side of the emergency compartment to ensure emergency needs during the first aid process to a greater extent.

Equipped with an automatic loading stretcher and an automatic loading stretcher platform, this stretcher has a light structure and is easy to operate. It can easily achieve a low-position transition when getting on and off the vehicle, and only requires one person to operate it.

Equipped with 15Mpa high-pressure aluminum alloy seamless oxygen cylinder, and the cylinder body is made of lightweight aluminum alloy material, with a capacity of up to 10L. In addition, the car is also equipped with auxiliary equipment such as ventilation fans, fire extinguishers, handrails, and waste buckets

Specification:

Main Specification	
Product Name	Automatic ambulance
Engine	2.3T 174PS L4
Max. power(kW)	128(174PS)
Max. torque (N·m)	430
Gearbox	6 speed manual
Overall Dimension(mm)	5498x2068x2485
Body structure	5 door 3 seater truck
Wheelbase(mm)	3300
Max. horsepower (Ps)	174
Max. power(kW)	128
Max. power speed (rpm)	3200
Max. torque (N·m)	430
Max. torque speed (rpm)	1400-2400
