Product Features

Isuzu Qingling V products have achieved low emission and low fuel consumption throughout their lifecycle. The vehicle performance has been synchronously improved, featuring:

Lower noise levels and reduced vibration for quieter, more comfortable driving

Fuel efficiency saving 10%-15% compared to domestic vehicles with equivalent load capacity

High-precision urea injection calibration reduces operating costs and facilitates customer refitting

Packaging & Delivery

TRANSPORTATION

Before the logistics transportation, we will have multiple processes to inspect and package the products to ensure that each product is delivered to customers with good quality.

To ensure optimal safety of your goods, we provide professional, environmentally friendly, and efficient packaging services.

Company Profile

Established in 2017 and headquartered in Zhengzhou, Henan Province, China, we maintain partnerships with:
